C1.18.4 Mouse IgG2a Isotype Control Antibody | PA007152.m2a

Catalog No.: PA007152.m2a | **Product Name:** In vivo Grade Recombinant C1.18.4 Mouse IgG2a Isotype Control Antibody | **In Vivo Grade / Recombinant Antibody**

Recombinant isotype control antibodies and Fc silenced mutants from clone C1.18.4 good for in vitro and in vivo studies. Low or no specific binding to human and mouse samples tested. Low prices for bulk order.

PRODUCT SPECIFICATIONS

Catalog No.	PA007152.m2a
Product Name	In vivo Grade Recombinant C1.18.4 Mouse IgG2a Isotype Control Antibody
Supplier / Brand	Syd Labs, Inc. / Syd Labs
Synonyms	Recombinant C1.18.4 Isotype Control, C1.18.4 Negative Control Antibody
Summary	The In Vivo Grade Recombinant C1.18.4 Mouse IgG2a Kappa Isotype Control Antibody was produced in mammalian cells.
Clone	C1.18.4
Isotype	Mouse IgG2a, kappa
Applications	an isotype-matched negative control for mouse IgG2a kappa antibodies used in ELISA, Western Blot (WB), Flow Cytometry (Flow), Immunoprecipitation (IP), Immunohistochemistry (Paraffin) (IHC (P)), Immunohistochemistry (Frozen) (IHC (F)), and in vivo animal model research.
Immunogen	N/A.
Form Of Antibody	0.2 μM filtered solution of 1x PBS.
Endotoxin	Less than 1 EU/mg of protein as determined by LAL method.
Purity	>95% by SDS-PAGE under reducing conditions.
Shipping	The In vivo Grade Recombinant C1.18.4 Mouse IgG2a Isotype Control Antibody is shipped with ice pack. Upon receipt, store it immediately at the temperature recommended below.
Stability & Storage	Use a manual defrost freezer and avoid repeated freeze-thaw cycles. 1 month from date of receipt, 2 to 8°C as supplied. 3 months from date of receipt, -20°C to -70°C as supplied.

BACKGROUND & DESCRIPTION

The C1.18.4 antibody (IgG2a, kappa) in nature is suitable for use as an isotype-matched control antibody to estimate the degree of non-specific binding by an antigen-specific antibody. The recombinant C1.18.4 IgG2a kappa isotype control and mutants (natural and engineered mIgG2a isotype controls) are useful for in vitro and in vivo studies from ELISA, Western blot (WB), to cell-based assay to animal model study.

Mouse IgG2a antibodies are similar to human IgG1 antibodies in many aspects, thus researchers like to use the isotype of mouse IgG2a in mouse studies. Most of the therapeutic antibody drugs carry the natural human IgG1 constant regions. More and more engineered mutants in the human IgG1 Fc fragment have been tested during therapeutic antibody drug development. The corresponding mutations have been introduced to mouse IgG2a to study enhancement and abrogation effects of Fc binding. We generated recombinant C1.18.4 mIgG2a isotype control mutants, the same mutations as those in the therapeutic antibodies and candidates because such mouse IgG2a isotype control mutants are needed when clients test their engineered antibody candidates. For example, P329G substitution combined with L234A L235A (mIgG2a LALAPG, Fc silenced) was shown to decrease effector functions by disrupting the Fc/Fcγ receptor interface.
