Anti-mouse MHC Class I (H-2Kd, H-2Dd) Antibody (34-1-2S, Mouse IgG2a Kappa) | PA007854.m2a

Catalog No.: PA007854.m2a | **Isotype:** Mouse IgG2a Kappa | **Flow Cytometry / In Vivo Grade**

Recombinant mouse anti-mouse MHC Class I (H-2Kd/H-2Dd) monoclonal antibody (Clone 34-1-2S), engineered with a Mouse IgG2a Fc domain for target binding, antigen detection, and cell depletion studies. Variable regions are derived from the classic mouse anti-mouse MHC Class I (H-2Kd/H-2Dd) clone 34-1-2S and recombinantly expressed in mammalian cells.

Product Specifications

Catalog No.	PA007854.m2a
Product Name	Recombinant Anti-mouse MHC Class I (H-2Kd, H-2Dd) Monoclonal Antibody (Clone: 34-1-2S), Mouse IgG2a Kappa
Clone & Isotype	34-1-2S | Mouse IgG2a Kappa
Applications	In Vivo Blocking/Depletion, Flow cytometry (FC), Functional Assays, and Immunohistochemistry - Frozen (IHC-F).
Reactivity & Specificity	Mouse MHC Class I (H-2Kd, H-2Dd). The recombinant 34-1-2S antibody specifically binds to mouse MHC Class I (H-2Kd, H-2Dd).
Source / Host	The anti-mouse MHC Class I (H-2Kd, H-2Dd) monoclonal antibody (clone: 34-1-2S) was produced in mammalian cells.
Formulation & Conjugate	0.2 uM filtered solution, pH 7.4, no stabilizers or preservatives. Non-conjugated.
Purity & Endotoxin	**>95%** by SDS-PAGE under reducing conditions and HPLC. | **< 1.0 EU/mg** (Ultra-low, In Vivo Grade).
Shipping	The recombinant anti-mouse MHC Class I (H-2Kd, H-2Dd) monoclonal antibody of clone 34-1-2S is shipped with ice pack. Upon receipt, store it immediately at the recommended temperature.
Stability & Storage	Use a manual defrost freezer and avoid repeated freeze-thaw cycles. 12 months from date of receipt, -20 to -70°C as supplied. 1 month from date of receipt, 2 to 8°C as supplied.

Biological Description & Background

Recombinant Mouse IgG2a Kappa Monoclonal Antibody.

Major Histocompatibility Complex (MHC) Class I molecules are cell-surface glycoproteins expressed on virtually all nucleated cells, presenting endogenous peptide antigens to CD8+ cytotoxic T lymphocytes and interacting with NK cell receptors. The H-2Kd and H-2Dd alloantigens are specific MHC Class I molecules expressed in BALB/c and other d-haplotype mouse strains.

Monoclonal antibody 34-1-2S specifically recognizes a conformational epitope shared by H-2Kd and H-2Dd molecules. Recombinantly produced in mammalian cells with an in vivo grade low-endotoxin Mouse IgG2a framework, this antibody serves as an essential tool for transplantation research, immunological gating, antigen presentation assays, and cell-surface phenotyping in H-2d mouse models.

Ordering & Technical Support

For custom volume ordering or inquiries, please visit the product webpage or contact our support team:
