BIOLOGICAL DESCRIPTION & RESEARCH APPLICATIONS

The rat anti-mouse OX40 / CD134 monoclonal antibody OX86 (rat IgG1 kappa) reacts with the mouse OX40 protein (CD134), a costimulatory molecule that belongs to the tumor necrosis factor receptor (TNFR) superfamily. OX40 agonist-based combinations are emerging as promising candidates for novel cancer immunotherapy. The OX86 antibody is recommended for detection of mouse OX40 cell surface antigen by IF and FCM available conjugated to either phycoerythrin or FITC for IHC (P) and FCM.

Our recombinant OX86 antibodies have a part (variable regions) or complete amino acid sequences of the rat anti-mouse OX40 monoclonal antibody (hybridoma clone name or number: OX86).
